Olson Technology Consulting teams up with ElectricTaz Racing

March 11, 2005- ElectricTaz Racing and Olson Technology Consulting have joined together for the 2005 season to bring new energy and a renewed focus to winning.

As part of the union OlsonTC president Derek Olson will be driving the #65 "Tornado". This car is in the process of being revamped for a whole new look to go with a new driver. Derek Olson has been driving in the Dwarf class since 2003. He brings to our team plenty of computer technology expertise. With his background we are looking for new ways of enhancing the fan experience.

OlsonTC brings two marketing partners to the team as Driver Sponsors for Derek Olson. These new marketing partners are Interstate Junction Motorcycles and People Photography.

Our shared goals are to find marketing opportunities as a one team, share expenses and vast resources that OlsonTC and ElectricTaz Racing have gathered over the years with the ultimate goal of producing a winning combination.

Other plans include bringing more to the fans and kids by being at events outside of the racing community. These events tentatively include, the Blooming Prairie July 4th Parade, Make-A-Wish night at Deer Creek Speedway, and the Annual Chateau/Deer Creek Car Show.

ElectricTaz Racing is Minnesota Classic Dwarf/Modlite Race Team started in 2001 by Jeremy Anderson. We have had drivers test out their abilities in our cars with one driver finishing second and another first as Chateau Raceway "Rookie of the Year". Our team theme is based on weather phenomena based on the original car design. We are proud sponsor of the Make-A-Wish Foundation of Minnesota and to date have raised over \$500. For further information visit www.electrictazracing.com or stop in the pits after the race to visit with our team.
